

**Respiratory Distress:**

RR:  $\geq 25 < 30$   
 O2 sat:  $< 96\%$  on RA  
 PaO2:  $< 70$   
 PaCO2: 33-35

**Respiratory Failure:**

RR:  $\geq 30$   
 O2 sat  $< 96\%$  on supplemental O2  
 PaO2  $\leq 65$   
 PaCO2  $\geq 35$

Labored breathing  
 Intercostal retractions  
 Inability to complete sentences  
 Thoracoabdominal dyssynchrony  
 Altered mental status

Labs: T+C x 2units, CBC, CMP, Lactate, PT, PTT, fibrinogen, Urine P/C, Respiratory panel, other blood products as indicated, Components of hospital COVID-19 panel not already ordered.

1. Parameters for delivery – usual obstetric indications:
  - Fetal indications-Cat 3 or persistent Cat 2 refractory to interventions and maternal stabilization
  - Maternal Indications-cardiopulmonary arrest immediate C-section irrespective of unit.
2. Parameters for de-escalation of care:
  - per consulting service in conjunction with MFM +primary Ob physician
3. Location of treatment at time of de-escalation
  - To L&D if needing obstetric care vs. MSU if no further obstetric needs
